Maser—Optimal Partnership

Maser Communications (NZ) Ltd has recently become the exclusive distributor partner for Optimal Cable Services range of Fibre Optic cables, connectivity and test equipment.

A full range of Multi-Mode and Single-Mode fibres covering OM1, OM3 and OS1 in Loose Tube and Tight Buffer for indoor and outdoor applications are stocked in our Auckland and Christchurch warehouses.

Metallic and non-metallic armoured options and short- or long-span ADSS aerial cables complete with all hanging hardware are available as indent. Fibre counts range from a single core 'Simplex' cord for patch leads and interconnects to 432 fibre cables in a loose tube construction for long-haul external applications.

Also stocked in New Zealand is a comprehensive range of pigtailed and patch cords that are manufactured using the latest in termination and polishing equipment. All assemblies are performance tested prior to delivery and most connector and cable types are available in assorted lengths.

Maser can also provide wall and rack mount enclosures, media converters, fusion splicers and cleavers, tool kits and a full range of test equipment.

We have consultants available to work with you on your project from the conceptual stage through to commissioning.

Contact Maser Communications (NZ) Ltd for all your Fibre Optic Requirements Ph: 0800 6637 825

New Maser Catalogue

Maser plans to launch its new product catalogue in January next year.

The new all colour Maser catalogue will include the entire Cable range from Industrial Cable, Fibre, RF CATV/MATV as well as LED lighting and many more.

So keep a look out for the catalogue release date on our website www.maser.co.nz

Maser Celebrates its 25th Anniversary

Maser recently celebrated its 25th year anniversary as a company in the industry.

Since starting in 1983 in Auckland, the Maser Group has grown into an International company with offices now in Auckland, Christchurch, Sydney, Melbourne, United Kingdom (both North & South) as well as France plus a new venture in Ireland which has just begun the past few months.

Maser has supplied products and continues to do so to many high profile customers over the world

including Telecom NZ, Alacatel/Lucent, BHP, Optus, Rio Tinto, Telestra, Bechtel, Vodafone and the Department of Defence.

So congratulations to all of the Maser staff who have made the past 25 years a successful one and we look forward to continual success and growth over the next 25 years.

Belden Exceeds the Standards

Belden exceeds the standards by delivering Installable Performance and extending sweep testing of Brilliance® Precision Video Cables to 4.5 GHz, paving the way for 1080P HDTV/ SDI format.

Belden's Brilliance® broadcast video cable are designed for maximum bandwidth, minimum return loss and minimum attenuation loss. These cables already meet the very tight specifications for electrical properties and are ideally suited for both analog and digital video in broadcast, post-production and other critical video applications.

The specifications for these cables have now increased from 3 GHz to 4.5 GHz, every reel is sweep tested for return loss and certified to the new higher frequency. This extension is designed to (re) assure broadcasters, leading edge broadcast manufacturers and the standards bodies that Belden delivers performance and reliability, as they begin to move from the existing 1080i (interlaced) HD format to the emerging 1080p (progressive) format.

Examples of how this leading edge technology has affected the broadcast industry can be seen in past sporting events which attracted global coverage such as the Commonwealth Games, the Winter Olympics, Football World Cup and the Basketball World Cup. This technology brought superior image quality to viewers worldwide and setting standards for viewer expectations in the future.

For further information on Belden's Brilliance® broadcast video cables contact the Maser Sales Team.
